## **The Official Presentation of the National Bioethics Commission on the applications of the AI in the Health sector in Greece**

The National Bioethics and Technoethics Commission of Greece in collaboration with the EPLO organizes an event to proudly present its views on the applications of Artificial Intelligence at the Health sector in Greece. The event will take place on March 1 at 18.00 at the EPLO premises at the Roman Agora. This correlates with the publication of the first official Greek document which comprehensively addresses the specific issue of the impact of the development and use of AI applications in health. The subject is topical, insofar as, on the one hand, remarkable relevant research initiatives are being taken, and, on the other hand, more and more AI applications are being established in clinical practice. Having already appointed a [High-Level Expert Group of AI](#) for its continuous support in AI issues and having organized repeated hearings of scientists and representatives of stakeholders, the Greek Commission in this Opinion maps the ethical issues raised by the applications of AI, approaches them through a set of ethical and operational-procedural principles, and formulates valid and feasible proposals for the harmonious integration of the AI applications in the Greek healthcare provision system
